

Problem3

Yufei Yin

Question 3a, (6 points):

Make a hisogram of the combat power (CP) of these pokoeemon.

```
query = "SELECT * FROM Vanpoke"
Vanpoke = dbGetQuery(dbcon, query)
hist(x = Vanpoke$cp,
     xlab = "combat power (CP)",
     main = "Histogram of combat power")
```

Question 3b, (6 points):

Make a kernel density plot of the combat power of these pokeemon.

```
plot(density(Vanpoke$cp),
     xlab = "combat power (CP)",
```

```
main = "kernel density plot of the combat power")
```
