

Midterm Q3

Yufei Yin

Question 3: Project

Consider the Best New Albums section of the popular music site Pitchfork. Write an R function to retrieve the text of a review of an album, and also the rating that the reviewer gives to the album (on the scale 0.0 to 10.0). Provide a function named `pitchfork` which takes a single parameter: a URL specified by a string. When this function is passed the URL to a review of an album in the Best New Albums section of Pitchfork, the `pitchfork` function should return a list with two elements:

- 1) an element named `text` with value given by the body of the review as a character string (with all HTML removed),
- 2) an element named `rating` with value given by the decimal value of the review, as a numeric. You can find URLs for these reviews by navigating to <https://pitchfork.com/reviews/best/albums/> and right clicking on an album and then selecting something like Copy Link.

Example usage follows. In this listing, the ellipsis indicates cropped R output.

Question 3: Part I

Provide a pdf containing all of the code that you wrote for this project. If your code spans multiple files, put all of the code into a single pdf and use comments to indicate the beginning of the files and the file names. You may use code from outside sources in your project provided that it is released under an open license and provided that you clearly indicate the code with comments.

```
library(httr)
library(stringr)
library(rvest)

pitchfork = function(url){

  df = data.frame(text = NA,
                  rating = NA)

  # text
  text = read_html(url) %>%
    html_nodes(".dropcap p") %>%
    html_text()

  df$text = str_c(text, collapse = "\n\n")

  # rating
  s = GET(url)
  s = content(s, "text")
  # remove space
  s1 = str_replace_all(s, "[[:space:]]", "")
```

```
# match
match = str_match_all(s1, "<spanclass=\"score\">(.*?)</span>")

df$rating = as.numeric(match[[1]][1,2])

return(df)
}
```

Question 3: Part II

Write a short report (in prose) arguing that the code you've provided works as required and provide a pdf of the report. Include output of R sessions in labeled figures. Provide some example calls of your implementation of the `pitchfork` function.

We are asked to apply web scraping by writing a function called `pitchfork()`. `pitchfork()` will take url as parameter, and return a data frame that contains “text” stands for album review text, and “rating” stands for the rate of the album.

We first use `data.frame()` function to build an empty data frame. The data frame has two columns: text, rating. Then, we use `read_html()`, pipe with `html_nodes()` and `html_text()` to extract the plain text. The output is a vector. Each element of this vector is one paragraph of the review article, so we use `str_c()` to concatenate them into one single string, and store it in the data frame. Moreover, we will extract album rating. we use `GET()` and `content()` to get the HTML source page, then use regular expression to get the rating, and store it in our data frame. Finally, our function should return the data frame.

After writing the `pitchfork()` function, we need to test whether it works as required.

Test 1

rating

```
url = 'https://pitchfork.com/reviews/albums/jeff-parker-suite-for-max-brown/'
review = pitchfork(url)
review$rating
```

```
## [1] 8.4
```

Figure 1: Jeff Parker Rating

The rating from our function is the same as the website.

text

```
cat(review$text)
```

The output is too long, so we only show a few paragraphs from the beginning.

As we can see, the first paragraph from the website is the same as our function output.

```
[[{"n": 1, "eval": FALSE}]]
cat(review$text)
```

Jeff Parker always writes parts that sound unassuming at first listen and unavoidable by the fifth. It's the X-factor that the guitarist and master collaborator has brought to every project on his long and still-growing list of projects, jazz or rock or otherwise: Tortoise, Isotope 217, the recently reunited Chicago Underground Quartet, his solo work as a bandleader, his work as a soloist, and his supporting contributions for countless others. Despite his ability to do backflips with a guitar, his best-known lick from Tortoise's 1998 song "TNT" is more like a heel-click—an easy, humble gesture, perfectly timed and placed.

It's a preternatural thing, of course, but it's also a skill that he's cultivated by changing up his scenery and embracing the unfamiliar. A few years ago, while splitting his time between his longtime home of Chicago and his new home of Los Angeles, Parker connected with the players at International Anthem, a new collective of jazz-raised, boundary-challenging musicians based in Chicago. Some of them were exploring the intersection of live improvisation and modern digital recording—loops, samples, beats—which was an area that had fascinated Parker ever since Madlib's jazz-ensemble project Yesterdays New Quintet blew his mind over a decade ago. Parker had been messing around with these elements for years during occasional DJ sets, thinking about how they could apply to his own playing, and had accumulated several hours of experiments. With this new label, he saw the right opportunity to formally release those results. He turned them into his 2016 album *The New Breed*, some of the most soulful and beat-driven music he'd ever put out under his own name and his first release for International Anthem.

What Parker tapped into on *The New Breed*, he blows wide open on *Suite for Max Brown*, a mesmerizing follow-up and informal companion piece. While his electric guitar remains a highlight, Parker builds out a fast-slashing range of ideas using dozens of other sounds and instruments, most of which he plays himself. They're disparate in color and texture, pronounced and often short, each one elbowing or sliding its way in front of the one before it, impatient to steal the show. As a player and composer, Parker shines throughout. As an arranger, he catches fire.

Suite for Max Brown is a place where a 26-second, Dilla-indebted loop of an Otis Redding sample and 10 minutes of a jazz quintet weaving around what sounds like someone stacking plastic cups can share a tracklist; each is equally meaningful. He's less of a specialist and more open to breadth than ever before. "Del Rio" opens with vintage-Korg cloud cover, which parts to reveal an easy-stepping melody that Parker plays on the African mbira—which in turn tees up a warm gust of wind in the form of a big, swooping guitar lick. That last move is one that Parker makes a few times on *Suite*: entering on guitar at just the right, unexpected moment of a tune. It's as smooth and elegant as calligraphy; it sounds like he's literally signing these new ideas with his signature instrument.

Figure 2: Jeff Parker text

Jeff Parker always writes parts that sound unassuming at first listen and unavoidable by the fifth. It's the X-factor that the guitarist and master collaborator has brought to every project on his long and still-growing list of projects, jazz or rock or otherwise: Tortoise, Isotope 217, the recently reunited Chicago Underground Quartet, his solo work as a bandleader, his work as a soloist, and his supporting contributions for countless others. Despite his ability to do backflips with a guitar, his best-known lick from Tortoise's 1998 song "TNT" is more like a heel-click—an easy, humble gesture, perfectly timed and placed.

text

```
cat(review$text)
```

Again, we obtain the same data from the website.

```
[r, eval=FALSE]
cat(review$text)
```

Kendrick Lamar's major-label albums play out like Spike Lee films in miniature. In both artists' worlds, the stakes are unbearably high, the characters' motives are unclear, and morality is knotty, but there is a central force you can feel steering every moment. The "Good and Bad Hair" musical routine from Lee's 1988 feature *School Daze* depicted black women grappling with colorism and exclusionary standards of American beauty. Mookie's climactic window smash in 1989's *Do the Right Thing* plunged its characters into fiery bedlam, quietly prophesying the coming L.A. riots in the process. In these moments, you could feel the director speaking to you directly through his characters and their trajectories. Lamar's records, while crowded with conflicting ideas and arguing voices, have a similar sense of a guiding hand at work.

Lamar's new album, *To Pimp a Butterfly*, doesn't explicitly bill itself as a movie like *good kid, m.A.A.d city* did, but the network of interlocking dramas explored here feels filmic nonetheless, and a variety of characters appear across the album's expanse. The opener, "Wesley's Theory", turns the downfall of action-star-turned-convicted-tax-dodger Wesley Snipes into a kind of Faustian parable. Snoop drops by on "Institutionalized"; Dre himself phones in on "Wesley". The mood is wry, theatrical, chaotic, ironic, and mournful, often all at once: On "For Free? (Interlude)" an impatient woman ticks off a laundry list of material demands before Kendrick snaps back that "This dick ain't free!" and thunders through a history of black oppression, spoken-word style, as if to say, "This money you crave, it's blood money." The album is dotted with surreal grace notes, like a parable: God appears in the guise of a homeless man in "How Much a Dollar Cost", and closer "Mortal Man" ends on a lengthy, unnerving fever-dream interview with the ghost of 2Pac.

The music, meanwhile, follows a long line of genre-busting freakouts (The Roots' *Phrenology*, Common's *Electric Circus*, Q-Tip's *Kamaal the Abstract*, André 3000's *The Love Below*) in kicking at the confines of rap music presentation. There's half a jazz band present at all times; pianist Robert Glasper, producer/sax player Terrace Martin and bass wizard Thundercat give *Butterfly* a loose, fluid undertow every bit as tempestuous and unpredictable as the army of flows at Kendrick's disposal. The rapper's branching out, too, exploding into spastic slam poetry on "For Free?", switching from shouty gymnastics to drunken sobs on "u" and even effecting the lilt of a caring mother on "You Ain't Gotta Lie (Mamma Said)". It turns out Kendrick's new direction was every direction at once.

Figure 5: Kendrick Lamar text

Kanye West's 35-minute super-video, *Runaway*, peaks with a parade. Fireworks flash while red hoods march through a field. At the center of the spectacle is a huge, pale, cartoonish rendering of Michael Jackson's head. *My Beautiful Dark Twisted Fantasy*'s gargantuan "All of the Lights" soundtracks the procession, with Kanye pleading, "Something wrong, I hold my head/ MJ gone, our nigga dead." The tribute marks another chapter in West's ongoing obsession with the King of Pop.

West's discography contains innumerable references and allusions to Jackson. His first hit as a producer, Jay-Z's "Izzo (H.O.V.A.)", sampled the Jackson 5's "I Want You Back". For many, his first memorable lines as a rapper came during 2003's "Slow Jamz": "She got a light-skinned friend look like Michael Jackson/ Got a dark-skinned friend look like Michael Jackson." And when West's recent interview with Matt Lauer on the "Today" show went awry, he took to Twitter, writing, "I wish Michael Jackson had twitter!!!!!! Maybe Mike could have explained how the media tried to set him up!!! It's all a fucking set up!!!!!!" Like most everything else, Kanye may exaggerate the kinship, but it's real. And it's never more apparent than on *Twisted Fantasy*, a blast of surreal pop excess that few artists are capable of creating, or even willing to attempt.

To be clear, Kanye West is not Michael Jackson. As he told MTV last month, "I do have a goal in this lifetime to be the greatest artist of all time, [but] that's very difficult being that I can't dance or sing." He ended the thought with a laugh, but you get the impression he's not kidding. Unlike Michael, he's not interested in scrubbing away bits of himself-- his blackness, his candidness-- to appease the masses. And while Jackson's own twisted fantasies of paranoia and betrayal eventually consumed him whole, West is still aware of his illusions, though that mindfulness becomes increasingly unmoored with each newspaper-splashing controversy. The balance is tenuous, but right now it's working to his advantage. On *Twisted Fantasy*, Kanye is crazy enough to truly believe he's the greatest out there. And, about a decade into his career, the hardworking perfectionist has gained the talent on the mic and in the control room to make a startlingly strong case for just that.
